AI RECRUITMENT REPORT

=====

=====

EXECUTION SUMMARY

=====

Role: AI/ML Engineer

Company: Accenture

Recommendation: Reject

Match Score: 32%

Confidence: 78%

=====

CANDIDATE INFORMATION

=====

Name: Sakshi Dethe

Email: sakshi@gmail.com

Phone: 1234567890

Location: Pune, Bangalore

=====

JOB DESCRIPTION

=====

Role: AI/ML Engineer

Company: Accenture

Experience Required: Minimum 5 years of real time experience in Machine Learning

Education Required: 15 years full time education; degree in Computer Science, Artificial Intelligence, Machine Learning or related field; Ph.D. highly desirable

Required Skills

- Machine Learning (ML)
- Python
- TensorFlow
- PyTorch
- Keras
- Data structures
- Algorithms
- Software engineering principles
- AWS
- Azure

- GCP
- Natural Language Processing (NLP)
- SpaCy
- NLTK
- Hugging Face
- Data visualization (Matplotlib, Seaborn, Plotly)
- Agile
- Scrum

Responsibilities

- Implement generative AI models and identify insights to drive business decisions
- Collaborate with cross functional teams to define AI project requirements and objectives
- Conduct research on latest advancements in generative AI, machine learning, and deep learning
- Optimize existing generative AI models for performance, scalability, and efficiency
- Ensure data quality and accuracy
- Lead design and development of prompt engineering strategies for GenAI models
- Implement cutting edge NLP techniques and prompt engineering methodologies
- Determine effective prompt generation processes and approaches
- Work with cloud platforms such as AWS, Azure, or related services
- Apply strong problem solving and analytical skills
- Handle various data formats and sources for speech and voice applications in conversational AI
- Perform statistical modeling
- Develop deep learning algorithms and neural networks
- Create documentation, technical specifications, user guides, and presentations
- Contribute to best practices and standards for generative AI development

=====

MATCH ANALYSIS

=====

Matched Skills (4)

- ☐ Python
- ☐ Git/GitHub
- ☐ Natural Language Processing (NLP) concepts (RAG, prompt engineering)
- ☐ Software development (FastAPI, automation tools)

Missing Skills (9)

- ☐ Machine Learning frameworks (TensorFlow, PyTorch, Keras)
- ☐ Data structures & algorithms

- ❑ Software engineering principles (design patterns, testing)
- ❑ Cloud platforms (AWS, Azure, GCP)
- ❑ NLP libraries (SpaCy, NLTK, Hugging Face)
- ❑ Data visualization (Matplotlib, Seaborn, Plotly)
- ❑ Agile / Scrum methodologies
- ❑ Deep learning model development & optimization
- ❑ Statistical modeling

Strengths

- Practical exposure to LLM-based agents and retrieval-augmented generation
- Experience building chatbots and automation pipelines during internships
- Proficiency in Python and version control (Git)
- Project portfolio showing end-to-end prompt-driven solutions

Weaknesses

- Only two short internships; far below the 5-year experience requirement
- No formal degree completed; does not meet the education criteria
- Lacks core ML/DL frameworks (TensorFlow, PyTorch, Keras)
- No demonstrated cloud platform experience (AWS/Azure/GCP)
- Missing essential NLP libraries and data visualization tools
- No evidence of Agile/Scrum or large-scale software engineering practices

=====

INTERVIEW QUESTIONS

=====

Question 1

Question : Can you explain the difference between a list and a tuple in Python, and give an example of when you would choose one over the other?

Category : Technical – Python Fundamentals

Difficulty : Low

Reason : Verifies the candidate's claimed proficiency in Python, a core requirement for the role.

Question 2

Question : Describe the typical Git workflow you followed while developing the Sales ChatBot during your TCS internship. How did you handle merge conflicts?

Category : Technical – Version Control

Difficulty : Low

Reason : Checks practical Git/GitHub experience mentioned in the resume and assesses collaborative coding habits.

Question 3

Question : What are the main components of a FastAPI application, and how did you expose the endpoints for your FAQ Bot project?

Category : Technical – FastAPI

Difficulty : Low

Reason : Validates hands-on experience with FastAPI, a skill listed on the resume.

Question 4

Question : In your Prompt2Flow automation project, how did you structure prompts to chain multiple LLM calls, and what challenges did you encounter?

Category : Technical – LangChain & Prompt Engineering

Difficulty : Low

Reason : Explores depth of knowledge in LangChain/LangGraph and prompt engineering, directly tied to the candidate's projects.

Question 5

Question : Explain the basic workflow of a RAG system. How did you implement vector similarity search in your Attendance System project?

Category : Technical – Retrieval-Augmented Generation (RAG)

Difficulty : Low

Reason : Assesses understanding of RAG, a highlighted skill, and connects to a concrete project.

Question 6

Question : What is a vector database, and which one did you use (or evaluate) for storing embeddings in your projects?

Category : Technical – Vector Databases

Difficulty : Low

Reason : Confirms familiarity with vector DB concepts mentioned in the resume.

Question 7

Question : Describe a workflow you built using n8n or Make to automate a part of the Sales ChatBot pipeline. What triggers and actions were involved?

Category : Technical – Automation Tools (n8n / Make)

Difficulty : Low

Reason : Validates practical use of low-code automation platforms listed in the skill set.

Question 8

Question : What is the difference between supervised and unsupervised learning? Provide a simple example of each that could be relevant to a chatbot system.

Category : Technical – Machine Learning Foundations

Difficulty : Low

Reason : Addresses a missing core ML skill and gauges basic conceptual understanding.

Question 9

Question : Even though you haven't used TensorFlow or PyTorch professionally, can you outline the steps you would take to train a simple text classification model using one of these libraries?

Category : Technical – Deep Learning Frameworks

Difficulty : Low

Reason : Evaluates learning ability for essential ML frameworks required by the job.

Question 10

Question : Explain how a hash table works and why it is useful for implementing a cache of recent user queries in a conversational AI system.

Category : Technical – Data Structures & Algorithms

Difficulty : Low

Reason : Tests fundamental DS&A; knowledge that is missing from the candidate's profile.

Question 11

Question : If you were to deploy your FAQ Bot on AWS, which services would you choose for hosting the API, storing embeddings, and scaling the model inference?

Category : Technical – Cloud Fundamentals

Difficulty : Low

Reason : Assesses basic cloud platform awareness, a gap in the resume.

Question 12

Question : What are the primary purposes of SpaCy and Hugging Face's Transformers library? How would you decide which one to use for entity extraction in a sales chatbot?

Category : Technical – NLP Libraries

Difficulty : Low

Reason : Checks awareness of key NLP libraries missing from the candidate's skill set.

Question 13

Question : Describe how you would visualize the distribution of user intents collected from your chatbot logs using Matplotlib or Seaborn.

Category : Technical – Data Visualization

Difficulty : Low

Reason : Evaluates familiarity with data visualization tools required by the role.

Question 14

Question : What are the main ceremonies in Scrum, and how could you apply them during a short-term internship project like the Attendance System?

Category : Technical – Agile / Scrum Basics

Difficulty : Low

Reason : Probes understanding of Agile practices, which are absent from the candidate's experience.

Question 15

Question : Explain what a confusion matrix is and how you would interpret it for evaluating a binary intent□classification model in a chatbot.

Category : Technical – Statistical Modeling

Difficulty : Low

Reason : Tests basic statistical modeling concepts required for the position.

Question 16

Question : Can you share an example of a time you had to quickly learn a new tool or library (e.g., LangChain) for a project? What steps did you take to become productive?

Category : Behavioral – Learning New Technologies

Difficulty : Low

Reason : Assesses adaptability and self□learning ability, important given the gaps in required skills.

Question 17

Question : Given that you have only two internships, how do you ensure the quality and robustness of the AI solutions you deliver?

Category : Behavioral – Working with Limited Experience

Difficulty : Low

Reason : Explores how the candidate compensates for limited professional experience.

Question 18

Question : Describe a situation where you collaborated with a cross□functional team (e.g., developers, product owners) during your internships. How did you handle differing priorities?

Category : Behavioral – Team Collaboration

Difficulty : Low

Reason : Evaluates teamwork and communication skills relevant to the collaborative nature of the role.

=====

FINAL VERDICT

=====

Recommendation : Reject

Overall Score : 32%

Confidence : 78%

Reason:

The candidate demonstrates enthusiasm for AI/ML and has hands□on experience with LLM□centric tools (LangChain, RAG, prompt engineering) and basic software development. However, the role requires at least 5 years of production□grade ML experience, a completed degree (preferably advanced), and proficiency in core ML frameworks, cloud services, and a broad set of NLP and software engineering skills that are absent from the resume. The gap in experience, education, and critical technical competencies makes the candidate unsuitable for this senior AI/ML Engineer position.
